Homework 6

Date Due: November 23rd, 2021, by 11:59 PM EST.

Please watch the YouTube video linked in this week's (Week 12) module (https://www.youtube.com/watch?v=S3m2TUdBzdk) on 'Creating a Code Review Culture' along with reading the checklist at GitHub - while1malloc0/code-review-checklist: A checklist for ensuring that code reviews are thorough and answer the following questions:

1. How should the proposed checklist for a code review be used by developers and reviewers?
2. The checklist references a PR or Pull Request to merge features into the main code base. What does the size and shape of a PR refer to?
3. What does the context for a PR refer to?
4. What should developers include for communicating the relevance of a PR?
5. For readability, what are the esoteric language features being referenced?
6. What are some of the rules for naming in a PR? Please explain why each rule is important.
7. Gotchas on how code can break things or issues it could raise should be specified as part of a PR. True/False.
8. It is generally always required to include a statement about security in the PR regarding a change to the code. True/False. Why is this statement important?
9. A Pull Request as per the author should be descriptive of the changes being made, what it affects, why anyone should care and how it addresses any issues. True or False.
10. What would you recommend including in a checklist for code review that were not already included in the given list on the author's Github site given above?
